The virtual Paspahegh project is a 3D virtual re-creation of a Native American village near Jamestown that was active during the early contact period. The layout and artifacts of the village are entirely based on archaeological data, illustrations, and journals from the period. The team of artists worked closely to insure accuracy of data and have included only those details that are found to be authentic to both the time period and the physical location. Users can navigate through the village and explore as if they were colonists or Native Americans to get a feel for what life was like in the time of early English settlement.

**Participants:** Dane Webster, School of Visual Arts, Virginia Tech; Crandall Shifflett, Department of History, Virginia Tech; Yong Cao, Department of Computer Science, Virginia Tech; Rhyannon Berkowitz, Department of Anthropology, University of Virginia; Pete Lustig, High School U.S. History, Roanoke County Public Schools; Steve Sizemore, 6th grade History, Roanoke County Public Schools

**Type:** Virtual Re-creation
