With help from two of his students — Chris Russell of Atlanta, Ga., a senior majoring in studio art, and Mallory Brangan of Norfolk, Va., a senior majoring in biochemistry and studio art — Dane Webster used models and single-frame renderings from architecture firms Snohetta and STV to create a virtual fly through of the center. Fly throughs are animated videos that allow users to virtually move through a structure, getting a close-up view of a building.

Participants: Dane Webster, Chris Russell and Mallory Brangan

Type: 3-D Visualization
