This design will turn the prominent fly tower space of the Street & Davis Performance Hall into a responsive environment. Enhancing the qualities and verticality of the space, the installation will be in slow and constant change actuated by live weather feed. The project seeks to activate the urban space while raising the awareness of global climate issues.

Participants: Paola Zellner (College of Architecture & Urban Studies); Tom Martin (College of Engineering); Students: Nathan Artis, Jesus Barney, Adam Burke, Joanna Cofer, Trey Hoffman, Saron Iasu, John Knuteson, Kelsey Margulies, Camila Paggi, Sarah Rege, Nikole Seavey, (College of Architecture & Urban Studies); Susanna Bradley, Ari Horowitz, (Industrial Design); Matt Bock, Justin Johnson, and Evan Spillane (College of Engineering) With Additional support from John Seminatore (College of Engineering)

Type: Environmental

Date: Spring 2014-Present
